PROFESSIONAL SUMMARY

ICT graduate with 3+ years hands-on experience in web development, system administration and cyber security. Proficient in deploying and maintaining websites using PHP Laravel framework, ASP.NET Core, JavaScript, HTML/CSS, and MySQL/SQL Server on VPS infrastructure. Experienced in building automation workflows, API integrations, webhooks, and data pipelines. Strong background in Windows and Linux server administration, DNS configuration, TCP/IP networking, system monitoring, and troubleshooting. Developed multiple full-stack web applications and landing pages with focus on performance, reliability, and security applying secure coding practices, input validation, authentication mechanisms, and server-level hardening to protect against common web threats. Solid foundation in database administration, software design and testing methodologies, and project management. Skilled in using AI-assisted development tools for efficient code generation and problem-solving. Detail-oriented, selfmotivated, and capable of working independently while responding quickly to urgent technical issues..

EDUCATION

ICT College of Vocational Studies | Belgrade, Serbia |
Internet Technologies specializing in web development

Graduated – Bachelor thesis: "Application of Artificial Intelligence in the Detection of Attacks on Web Applications"

PROFESSIONAL EXPERIENCE

Professional Internship: Completed a professional internship at MS DEV STUDIO UMKA (Marko Stančić Preduzetnik, Računarsko programiranje), working on website development, maintenance, and testing using PHP (Laravel) and MySQL.

Full-Stack & Frontend Development: **Built and deployed** full-stack web applications and responsive frontend interfaces using ASP.NET Core, Angular, PHP (Laravel), JavaScript, HTML5, CSS3, and MySQL/SQL Server. Created custom landing pages optimized for conversion with a focus on page load speed, cross-browser compatibility,

and mobile responsiveness. Implemented tracking pixels, conversion tracking, and analytics integration for marketing campaigns.

Web Security: SQL injection prevention, XSS mitigation, CSRF protection, secure authentication (hashing, JWT, session management), HTTPS/TLS, input validation and sanitization, public-key cryptography and PKI fundamentals. Implemented structured application logging in Laravel projects for audit trails and anomaly detection. Monitored Apache and Nginx access/error logs to identify suspicious request patterns, brute-force attempts, and potential injection attacks.

Database Administration: Designed and normalized relational database schemas, wrote complex T-SQL/SQL queries (joins, subqueries, aggregation), created and managed stored procedures, triggers, views, and indexes. Performed backup, recovery, and performance-tuning tasks on MySQL and SQL Server, including access control and data-security procedures.

API Integration & Webhooks: Configured webhooks and API integrations for connecting different systems and platforms. Implemented RESTful API endpoints, handled JSON/XML data formats, and built integrations between web applications and third-party services. Troubleshoot API connection issues and ensured reliable data exchange between systems.

Backend Development: Developed backend services using ASP.NET Core (C#) and PHP (Laravel), with MySQL and SQL Server databases. Built e-commerce platforms, content management systems, and data-driven web applications with secure authentication, database optimization, and layered/MVC architecture. Implemented payment integrations and order-processing workflows.

Windows & Linux Server Administration: Active Directory management including Organizational Unit (OU) structure design and user/group administration, Group Policy configuration and enforcement (GPO), DNS zone management (forward/reverse lookup zones), DHCP configuration, FTP server setup and hosting configuration, Windows Firewall inbound/outbound rule management, RAID configuration and storage redundancy concepts. Linux administration including command-line operations, user/group management, shell scripting, software RAID, and system monitoring/logging.

Networking & TCP/IP: Practical understanding of the OSI and TCP/IP models, application-layer protocols (HTTP, FTP, DNS, DHCP), transport-layer protocols (TCP/UDP), IPv4/IPv6, subnetting, and network device fundamentals (routers, switches).

TECHNICAL SKILLS

Programming & Scripting: C# (.NET / ASP.NET Core), PHP (Laravel, custom backends), Python, JavaScript/TypeScript (ES6+, jQuery, Angular), Java (Servlets, JSP, JSF, JDBC), HTML5, CSS3.

Frameworks & Frontend: ASP.NET Core Web API, Angular, Laravel, Bootstrap, responsive design, WordPress, performance optimization, cross-browser compatibility.

APIs & Integration: RESTful APIs, gRPC, webhooks configuration, API authentication (JWT), JSON/XML data formats, third-party integrations, S2S postback tracking (basic understanding).

Database Management: SQL Server (T-SQL), MySQL, Oracle (APEX, basic), Entity Framework Core, database design & normalization, query optimization, stored procedures/triggers/views, data migration, backup and recovery procedures.

Systems & Networking: Windows Server Administration (Active Directory, IIS, GPO, Hyper-V), Linux Administration (shell scripting, networking services, virtualization), TCP/IP Architecture, DNS/DHCP configuration, network troubleshooting.

OOP & Software Design: Layered / three-tier architecture (Presentation, Business Logic, Data Access), design patterns (Singleton, Template Method, Composite, Observer), SOLID principles, UML modeling, software testing methodologies (unit, integration, regression), C# and Java OOP.

IT Security Fundamentals: Malware classification, antivirus and endpoint protection, phishing and social-engineering awareness, basic threat analysis and incident identification, vulnerability patching, cryptography and PKI basics, ISMS/ISO 27001 concepts, Windows Firewall rule management.

Project Management: Task planning and scheduling, resource allocation, risk and quality management, MS Project.

Development Tools: Git/GitHub (version control), Visual Studio / VS Code, AI-assisted development and debugging tools.

WEB DEVELOPMENT PROJECTS

Agnesa Full-Stack Bookstore Application | Full-stack web application with an ASP.NET Core Web API back-end (C#) and an Angular (TypeScript) front-end, backed by a SQL Server database. Implements a RESTful API with layered architecture and Entity Framework Core data access, plus a responsive single-page Angular client consuming the API. Demonstrates modern .NET + Angular full-stack development, clean API design, and relational database modelling. [\[GitHub\]](#)

Rumfl Hardware Store | Hardware store e-commerce platform developed with Laravel back-end framework and MySQL database. Features include product catalog management, shopping cart, user authentication, order processing, admin dashboard for inventory management, and responsive design. Demonstrates full-stack development with MVC architecture and Eloquent ORM. [\[Drive Link\]](#)

Cyborg Games - E-Commerce Platform | Full-stack video game shop with PHP backend, JavaScript frontend, and MySQL database. Features include user authentication, shopping cart, payment integration, product management, and admin dashboard. [\[Live Demo\]](#)

Chinese Restaurant Web App | Responsive restaurant website with online ordering system using HTML5, CSS3, and JavaScript. Features real-time order processing and dynamic menu management. [\[Live Demo\]](#)

Restaurant 016 | Modern restaurant application using Bootstrap framework with responsive design optimized for all devices. [\[Live Demo\]](#)

Free Festival - Music Festival Website | Interactive music festival landing page with event scheduling, artist profiles, and ticket information using HTML, CSS, and JavaScript. [\[Live Demo\]](#)

Directory Management System | Python-based application [\[GitHub\]](#)

Tetris Game Implementation | Classic Tetris game demonstrating object-oriented programming and game logic using JavaScript. [\[GitHub\]](#)

Portfolio Website | Personal portfolio showcasing technical projects, skills, and professional experience. [\[Live Demo\]](#)

KEY COMPETENCIES

- **Detail-Oriented & Reliable** – Meticulous attention to detail in server configuration, deployment procedures, and code quality. Consistent track record of delivering reliable solutions and maintaining system uptime.

- **Collaborative Team Player** – Experience working closely with designers, content creators, and technical teams. Clear communicator who bridges technical and non-technical stakeholders effectively.
- **Remote Work Experience** – Proven ability to work effectively in remote environment with flexible schedule. Self-disciplined with strong time management and organizational skills.
- **Languages** – Serbian (Native), English (Fluent – C1 Level, excellent written and verbal communication)
